

Foxes – Skimming and Scanning Task

Foxes are a distinctive relative of the wolf which belongs to the dog family. They can live for up to 14 years in captivity and around two years in the wild. In addition, foxes are quite small with most of them weighing around 6 to 8 pounds. Unlike wolves, foxes are generally solitary animals and they hunt on their own rather than in packs.

Foxes are quite unique in their appearance. They have long bushy tails and narrow faces. They have small stomachs so consequently, they eat small meals every day. Their hearing is incredible due to their large triangular ears which help them to listen out for all the rodents. This enables them to be fantastic hunters. Foxes can reportedly hear a watch ticking 40 yards away!

These mammals are nocturnal and hunt at night, although this can change depending on where the fox pack lives. If they live in a place where they feel safe, a fox pack may hunt during the daytime. They are great night-time predators because their eyes are specially adapted to night vision. Foxes are omnivores and will eat just about anything. Their diet can consist of a variety of small animals, such as lizards, voles, rats, mice, rabbits and hares. This obviously changes depending on which country they live in. Sometimes foxes catch mice just to play with them, rather than eating them. When they become bored, they let the mouse go! Occasionally, they snatch chickens from the chicken coop!

Generally, foxes live in forested areas but can also be found in mountains, grasslands and deserts. They make their homes by digging burrows in the ground (also known as dens) which provides a cool area to sleep, a good location to store food and a safe place to have their pups. Like many other burrows, they have several exits so that they can flee if a predator enters.

There are 12 different species of foxes, one being the red fox. This is the most common type; it is usually the fox that we refer to when we discuss foxes. Another type of fox is the arctic fox. These foxes live in cold climates in the far north and have deep thick fur to keep them warm. The Fennec fox lives in the North African desert and is the smallest of all the different types, weighing just 2 to 3 pounds. Their feet are hairy, which helps protect them from extremely hot sand and helps them to dig underground dens.

Female foxes are called vixens whilst a male fox is called a dog. Baby foxes are called pups, kits or cubs and a group of foxes is called a skulk or a leash. There is usually one female fox who is the boss and she is the only one in her area that has babies. The other adult foxes help her raise the pups.

Skimming and Scanning Challenge

1. The word 'foxes' appears 14 times. Underline them all in red.
2. The word 'them' appears 8 times. Underline them all in blue.
3. The word 'the' appears 21 times. Underline them all in green.
4. The word 'they' appears 15 times. Underline them all in purple.
5. The word 'is' appears 9 times. Underline them all in yellow.
6. Circle the word 'fox' in red. How many are there? ____
7. Circle the word 'pups' in blue. How many are there? ____
8. Circle the word 'which' in green. How many are there? ____
9. Circle the word 'eat' in purple. How many are there? ____
10. Highlight all of the commas in orange. How many are there? ____
11. Highlight all the semi-colons in pink. How many are there? ____

Circle the correct answer to complete each sentence. Use skimming and scanning techniques to find the evidence in the text.

12. Foxes have long, bushy tails and narrow...

cheeks.	faces.	legs.	eyes.
---------	--------	-------	-------

13. Foxes' feet are hairy, which helps protect them from extremely hot...

food.	mud.	sand.	soil.
